

## HASA VHR QuickStart – Transcribed Reports Tab

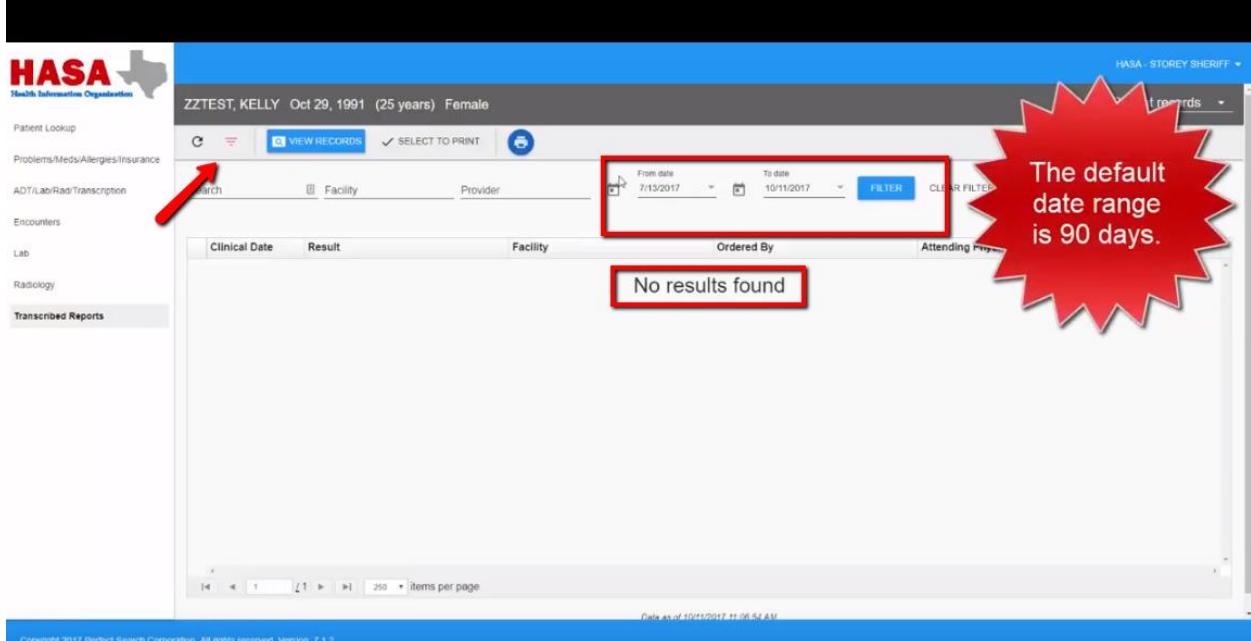

The “Transcribed Reports” tab will provide more details about individual transcribed reports listed in the VHR. You can get to this tab by clicking on the “Transcribed Reports” tab along the left-hand side of your screen or by clicking the “Transcription Reports” title from on the “ADT/Lab/Rad/Transcription” page.

Below the patient’s information you’ll see several function buttons. For more details about these buttons, please see the Quickstart Guide for ADT/Lab/Rad/Transcriptions.

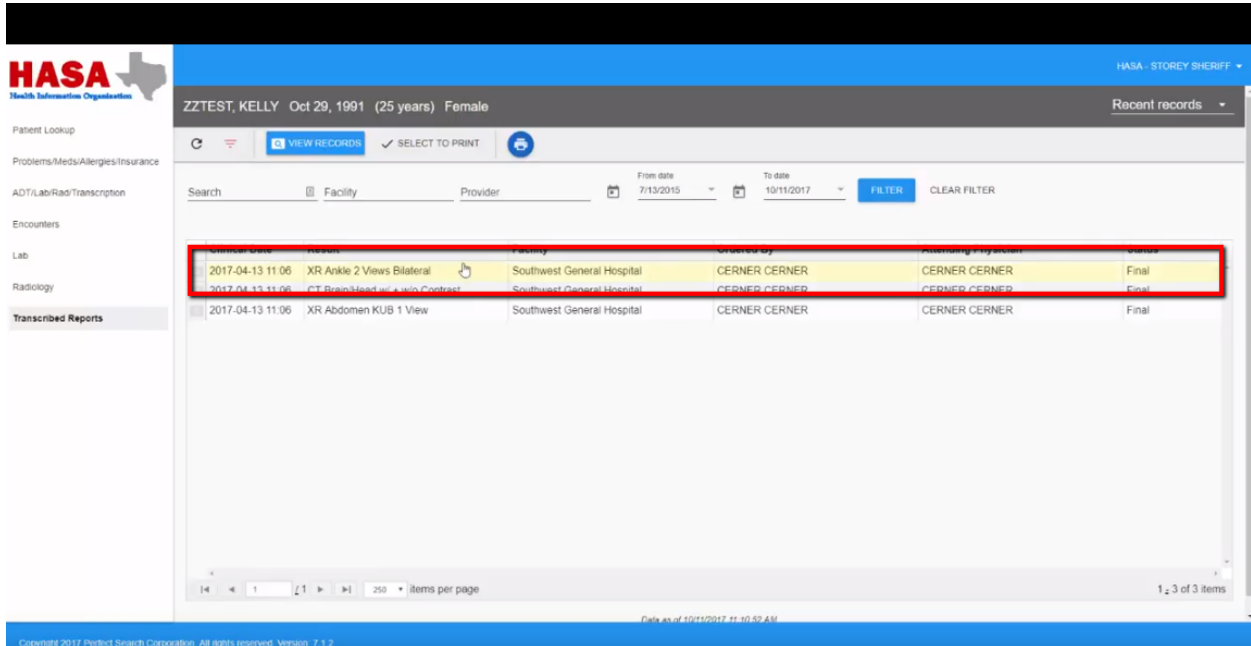

Since we don't have any results available in the default 90-day date range window, click the "Filter" icon to customize the date range. When you have chosen the correct date range, click "Filter".

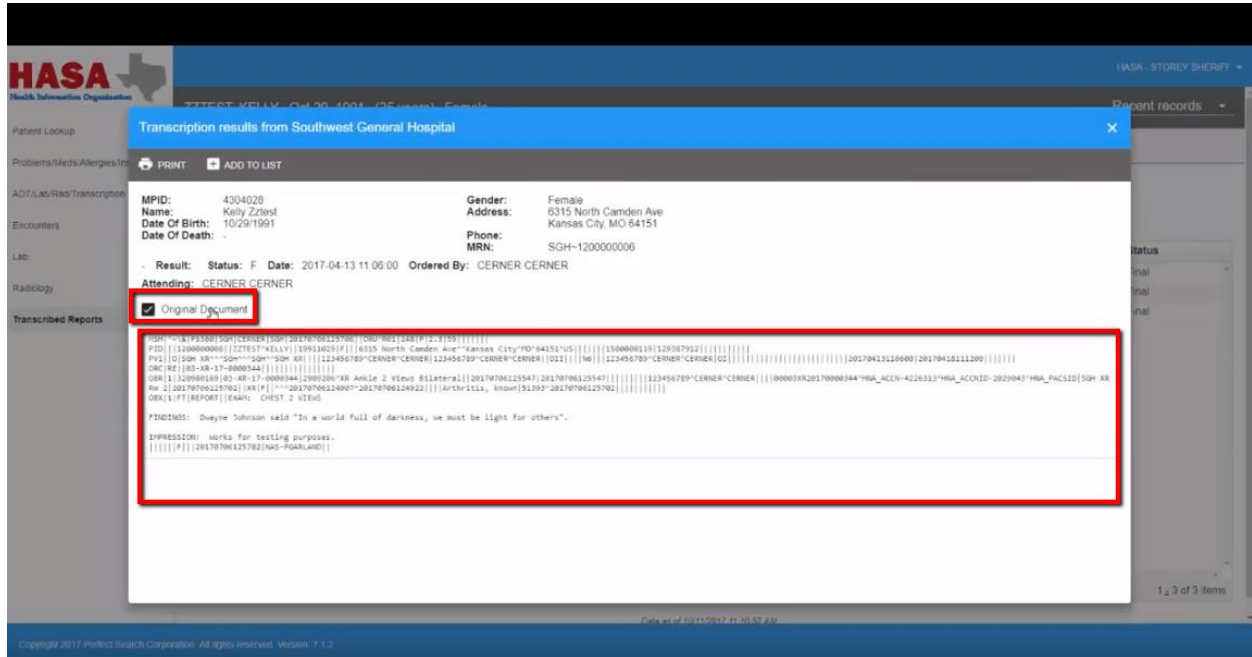

The columns available are "Result" (Transcription Name), "Facility", "Ordered by" (Physician), "Attending Physician", and Status. To see more information about a specific transcription, click the desired record.

**Note: These codes will be normalized in a future version.**

From the expanded view, you can see details about the transcribed report. By clicking in the “Original Documents” box you can find more treatment details such as report name, techniques, findings, impressions and provider/care team. This information is typically sent to HASA in free text sections and can’t be broken into discrete fields, so make sure to view this document.

You can print this individual record by clicking the “Print” button at the top of the document or you can click “Add to List” to add it to your list of documents to print later.
